micron WATER FILTERS

Store Visit — Rep Card

Everything you do in a branch, every time

THE TOOL
micronwater.github.io/visit

EVERY VISIT, IN ORDER

1. **Open the card**
   Basecamp → **Galvin's Trade Stores** → your branch column → the **Store Visits** card. Everything starts there.

2. **Before photo**
   Take it and attach it to that card, before you touch anything.

3. **Open the app**
   Tap the link on the card and pick your branch. Last visit's bay and MIN/MAX come straight back. Fill in **Next visit** while you are up there.

4. **Count every line on the bay**
   Including the back stock. Tap + − or type it.

5. **Work the twelve steps**
   Tick as you go, not at the end.

6. **Log anything broken**
   Owner and date on every one, or it goes nowhere.

7. **Check the score**
   It is live. Fix what is dragging it while you are still in front of the bay.

8. **After photo, then post it**
   Copy for Basecamp → paste it on the card as a **comment**, never in the Notes. Attach the after photo to the same card.

9. **Hit Save**
   Bottom right of the app. This is what carries the counts to next month.

One card per branch, and it stays there. The comments on it are that branch's visit history.

COUNTING — WHAT THE COLOURS MEAN

CRITICAL
Zero, or half MIN or below. Orders **MAX − current**

ORDER
At MIN or below. Orders **MAX − current**

OK
Between MIN and MAX. Nothing to do

OVER
At MAX or above. Ask why it is sitting

Not on the bay? The whole range is underneath it — tap a group, tap a series, tap the line. 217 products, two taps to any of them, and a search box that takes a code or a word. Counting one still puts it on the order and in the report, tagged **(off range)**, and it will not touch your score.

THE TWELVE STEPS

☐	01	Before photo taken	4 pts
☐	02	Display clean, in position, header board on	
☐	03	No competitor stock in our bay	
☐	04	Every SKU counted	
☐	05	Faced and fronted, gaps filled	
☐	06	Prices right — shelf ticket AND their system	10 pts
☐	07	Brochures and spec sheets topped up	
☐	08	MIN cards in the right position	7 pts
☐	09	Order raised, or nothing needed	
☐	10	After photo taken	4 pts
☐	11	Every action has an owner and a date	2 pts
☐	12	Next visit booked	

You tick these in the app, not in Basecamp — the report you paste onto the card says how many you got. The points column is what each one is worth beyond the 2½ every step carries.

ANYTHING BROKEN

+ Add something broken... picks the colour and the due date for you. **Every one needs an owner and a date.**

COLOUR	FIX IN	WHAT GOES HERE
RED	**7 days**	Price wrong in their system · stock not delivered · zero stock on a core line
AMBER	**30 days**	Display damaged or moved · damaged product · competitor stock in our bay · brochures out · Store Champion has left
GREEN	**60 days**	Display tidy-up · range opportunity · anything else worth noting

YOUR SCORE OUT OF 100

35 STOCK	30 12 STEPS	15 MIN/MAX	10 PRICING	10 EVIDENCE

Stock every counted line above MIN earns all 35; 80% earns 18. **Steps** 2½ each. **MIN/MAX** 8 for having them set on every line, 7 for step 8. **Pricing** step 6. **Evidence** 4 + 4 for the photos, 2 for owned actions.
90+ Excellent · 75 Good · 60 Needs improvement · under 60 Action required

THE TWO THAT REALLY HURT

One line at zero costs 35 — all of the stock score, not some of it. Best you can do that day is 65.
Not confirming pricing costs 12. Best possible is 88, so you cannot reach Excellent. It takes a minute at the counter.

micron WATER FILTERS

A branch you have never done

Set it up once — then every visit after is just counting

THE TOOL
micronwater.github.io/visit

FIRST, ON YOUR PHONE

Open **micronwater.github.io/visit** and add it to your home screen — iPhone: Share → **Add to Home Screen**; Android: ⋮ → **Add to Home screen**. Nothing to install, no login, and it works without signal once it has loaded.

READ THIS TWICE

Branch setups live **on that phone, in that browser** — not in the cloud, and nobody else can see them. A new phone, a different browser, or clearing your browser data means starting empty. **Back it up monthly:** section 5 → Backup saves a file, Restore loads it onto another phone.

1 · BUILD THE BAY

The card under the setup fields tells you where you stand. "Nothing saved for this branch yet" means you are first here. Pick the branch before you start — the bay is saved against it.

- Tap EDIT BAY, top right of the stock list. Every row becomes one tap — no steppers to mis-tap.
- Tap ON BAY to drop a line the store does not carry.
- Open the full range below and tap + ADD to add one.
- Tap DONE. That saves the bay against the branch straight away.

You are scored out of what this branch actually carries, not the tier list. A store with room for fourteen lines is marked out of fourteen.

TIER	LINES	WHAT IT IS
Tier 1	**54**	Full bay — every system family with the core cartridges each one feeds
Tier 2	**33**	Half bay — every category still there, one or two cartridges each
Tier 3	**13**	Counter spinner or a shelf — two systems and the fastest movers

Changing **Display tier** after you have built a custom bay offers to wipe it. It asks first. Say no unless you mean it.

2 · SET THE MIN AND THE MAX

MIN triggers an order. MAX is what you fill back up to. Every ranged line already carries a launch number — leave it alone on a first visit, it holds for about ninety days.

CLASS	WHAT IT IS	T1	T2	T3
A	Core mover — sells every week	**2/6**	**2/5**	**2/4**
B	Range — carried so the family is complete	**1/3**	**1/3**	**1/2**
C	Hero system — the box on the shelf	**1/2**	**1/2**	**1/1**
D	Display only — one on the stand	**1/1**	**1/1**	**1/1**

As the range stands, no Tier 3 bay carries a B line and only Tier 1 carries a D.

A line **you** added starts with no numbers and reads NO MIN/MAX. Tap the dashed box on the right of the row and type them. Think about what the store would be embarrassed to run out of.

Then tap Save branch setup on the branch card. The card should read **Bay n SKUs · set for this branch** and **MIN/MAX on n of n** — if the second number is short, some lines are still blank. You can do a whole setup round without counting a single unit.

AFTER THE FIRST VISIT IT DOES THIS FOR YOU

The page works out what actually sold between visits and offers new numbers — *"6 MIN/MAX changes suggested…"* with an Apply, then move the MIN cards button. Applying it deliberately un-ticks step 8, because the cards on the shelf now say the wrong thing and you are standing right next to them.

Tap Stock came in and enter what the branch received since your last visit — without it the page reads a delivery as a sale.

IF SOMETHING LOOKS WRONG

WHAT YOU ARE SEEING	WHAT TO DO
The branch is empty	Different browser, or a new phone. Open it from the home screen icon; otherwise **Restore** your backup.
The bay is the wrong size	Check **Display tier**. If the tier is right, use EDIT BAY.
The steppers vanished	You are in bay-edit mode. Tap DONE.
A line says NO MIN/MAX	Counted, but no reorder point. Tap the dashed box and set them.

WHAT YOU ARE SEEING	WHAT TO DO
"Not scored yet"	Nothing counted yet. It starts scoring on the first count.
Counted one I should not have	Clear the box. Empty means "not counted" and does not score.
A product is missing entirely	Search the full range first. If it is genuinely not there, tell George — it is a change to the page.
It will not load in the branch	Once loaded on your phone it works without signal. First time on a phone, load it before you leave the yard.

THREE HABITS — **Count the back stock, not the facings.** — **Fix the score before you leave.** — **A name and a date on every problem.**
