micron WATER FILTERS

A branch you have never done

Set it up once — then every visit after is just counting

THE TOOL
micronwater.github.io/visit

FIRST, ON YOUR PHONE

Open **micronwater.github.io/visit** and add it to your home screen — iPhone: Share → **Add to Home Screen**; Android: ⋮ → **Add to Home screen**. Nothing to install, no login, works without signal once loaded — so on a new phone, open it once before you leave the yard.

> **READ THIS TWICE**
>
> Branch setups live **on that phone, in that browser** — not in the cloud. A new phone, a different browser, or clearing browser data means starting empty. **Back it up monthly:** section 5 → Backup saves a file, Restore loads it onto another phone.

1 · BUILD THE BAY

A branch nobody has set up opens with **one line** — WH303A/X — and the header reads **not set up yet**. Pick the **customer and the branch** first; the bay is saved against both, so three different Pakenhams stay three different stores.

- Tap EDIT BAY, top right of the stock list — every row becomes one tap.
- Open the full range below and tap + ADD on everything the store carries. Search by code if you know it.
- Carries the lot? Load the Tier 2 list puts them all on at once — then drop what it does not carry.
- ON BAY drops a line; Clear back to one line starts over.
- Tap DONE. That saves the bay against the branch straight away.

You are scored out of what this branch carries, not the whole range.

TIER	LINES	IF YOU LOAD IT
Tier 1	**54**	Full bay — every system family with the core cartridges each one feeds
Tier 2	**33**	Half bay — every category still there, one or two cartridges each
Tier 3	**13**	Counter spinner or a shelf — two systems and the fastest movers

The tier is a label and a shortcut, not the bay.

2 · SET THE MIN AND THE MAX

MIN triggers an order. MAX is what you fill back up to. **Nothing is pre-filled** — every line you put on the bay reads NO MIN/MAX until you type the numbers. Tap the dashed box on the right of the row. Start from here:

CLASS	WHAT IT IS	T1	T2	T3
A	Core mover — sells every week	**2/6**	**2/5**	**2/4**
B	Range — carried so the family is complete	**1/3**	**1/3**	**1/2**
C	Hero system — the box on the shelf	**1/2**	**1/2**	**1/1**
D	Display only — one on the stand	**1/1**	**1/1**	**1/1**

A guide, not a rule — the numbers the range launched on. Judge each line on what this store would be embarrassed to run out of.

Then tap Save branch setup — or Update branch setup if the branch already has one. The card should read **Bay n SKUs · set for this branch** and **MIN/MAX on n of n**.

> **THAT BUTTON IS THE ONLY THING THAT SHARES YOUR WORK**
>
> Until you press it the card says **On this phone only** — nobody else sees it. Press it and it reads **Shared with everyone**, and every device gets it. No reception? **Waiting for signal** — it sends itself next time you open in range. If it does not say *Shared with everyone*, the team does not have it.

> **AFTER THE FIRST VISIT IT DOES THIS FOR YOU**
>
> The page works out what actually sold between visits and offers new numbers — *"6 MIN/MAX changes suggested…"* with an Apply, then move the MIN cards button. Go and move the shelf cards straight after — they now say the wrong number and you are standing there.
>
> Tap Stock came in and enter what the branch received since your last visit — without it the page reads a delivery as a sale.

IF SOMETHING LOOKS WRONG

WHAT YOU ARE SEEING	WHAT TO DO
The branch is empty	Different browser, or a new phone. Open it from the home screen icon; otherwise **Restore** your backup.
The bay is the wrong size	Check **Display tier**. If the tier is right, use EDIT BAY.
Steppers gone	You are in bay-edit mode. Tap DONE.

WHAT YOU ARE SEEING	WHAT TO DO
"Not scored yet"	Nothing counted yet. It starts scoring on the first count.
"On this phone only"	Not shared yet. Tap **Save** or **Update branch setup**.
A product is missing entirely	Search the full range first. If it is genuinely not there, tell George — it is a change to the page.

micron WATER FILTERS

Store Visit — Rep Card

Everything you do in a branch, every time

THE TOOL
micronwater.github.io/visit

EVERY VISIT, IN ORDER

1. **Open the card**
   Basecamp → your state's Sales Manager project → your **customer's** card table → your branch column → the **Store Visits** card. Everything starts there.

2. **Before photo**
   Take it **straight into that card** in Basecamp, before you touch anything — not into your camera roll to find later.

3. **Open the app**
   Tap the link on the card, then pick your **customer** and your **branch**. It opens on a **clean visit every time** — the bay and the MIN/MAX come back, last visit's counts do not. Fill in **Next visit** while you are up there.
   Interrupted part-way through? An orange line at the top offers it back — tap **Bring it back**.

4. **Count every line on the bay**
   Including the back stock. Tap + − or type it. In a Galvins store each line also shows their order code beside ours.

5. **Work the eleven steps**
   Tick as you go, not at the end.

6. **Log anything broken**
   Owner and date on every one, or it goes nowhere.

7. **Check the score**
   It is live. Fix what is dragging it while you are still in front of the bay.

8. **After photo, then post it**
   Take the after photo **into the same card**, then Copy for Basecamp → paste it there as a **comment**, never in the Notes. Both photos and the report live on the one card.

9. **Hit Save**
   Bottom right of the app. This is what carries the counts to next month.

One card per branch, and it stays there. The comments on it are that branch's visit history.

COUNTING — WHAT THE COLOURS MEAN

CRITICAL	ORDER	OK	OVER
Zero, or half MIN or below. Orders **MAX − current**	At MIN or below. Orders **MAX − current**	Between MIN and MAX. Nothing to do	At MAX or above. Ask why it is sitting

Not on the bay? The whole range is underneath it — tap a group, tap a series, tap the line. 216 products, two taps to any of them, and a search box that takes a code or a word. Counting one still puts it on the order and in the report, tagged **(off range)**, and it will not touch your score.

THE ELEVEN STEPS

☐	01	Before photo taken	4 pts
☐	02	Display clean, in position, header board on	
☐	03	No competitor stock in our bay	
☐	04	Every SKU counted	
☐	05	Faced and fronted, gaps filled	
☐	06	Prices right — shelf ticket AND their system	10 pts
☐	07	Brochures and spec sheets topped up	
☐	08	Order raised, or nothing needed	
☐	09	After photo taken	4 pts
☐	10	Every action has an owner and a date	2 pts
☐	11	Set subtask — next visit and action needed, with **date**	

You tick these in the app, not in Basecamp — the report you paste onto the card says how many you got. The points column is what each one is worth beyond the 3⅓ every step carries.

ANYTHING BROKEN

+ Add something broken... picks the colour and the due date for you. **Every one needs an owner and a date.**

COLOUR	FIX IN	WHAT GOES HERE
RED	**7 days**	Price wrong in their system · stock not delivered · zero stock on a core line
AMBER	**30 days**	Display damaged or moved · damaged product · competitor stock in our bay · brochures out · Store Champion has left
GREEN	**60 days**	Display tidy-up · range opportunity · anything else worth noting

YOUR SCORE OUT OF 100

35	37	8	10	10
STOCK	11 STEPS	MIN/MAX	PRICING	EVIDENCE

Stock every counted line above MIN earns all 35; 80% earns 18. **Steps** 3⅓ each. **MIN/MAX** 8 for having them set on every line. **Pricing** step 6. **Evidence** 4 + 4 for the photos, 2 for owned actions.
90+ Excellent · 75 Good · 60 Needs improvement · under 60 Action required

THE TWO THAT REALLY HURT

One line at zero costs 35 — all of the stock score, not some of it. Best you can do that day is 65.
Not confirming pricing costs 13. Best possible is 87, so you cannot reach Excellent. It takes a minute at the counter.

THREE HABITS — Count the back stock, not the facings. · Fix the score before you leave. · A name and a date on every problem.
